2. High-Level Architecture
3. Technical Stack
4. UX Layer (SharePoint Framework)
5. Data Layer (SharePoint Lists)
6. Automation Layer (Power Automate)
7. Security Model
8. Build & Deployment
9. Code Quality
10. Future Roadmap

Problem Statement: The Challenge

Organizing and managing access to critical documents in SharePoint often leads to frustration:

1. **Discovery Issues:** Users struggle to find the right policy or SOP trapped in deep folder structures.
2. **Access Blind Spots:** No visibility into *who* is accessing sensitive documents or *when*.
3. **Manual Overhead:** Content owners are flooded with email requests for access approvals.
4. **Inconsistent Brand:** Standard libraries look generic and don't match the corporate identity.

The Solution: Order from Chaos

Custom Document Listing bridges the gap between chaos and efficiency.

- **Centralized Catalog:** Organized by Category and Sub-Category for instant discovery.
- **Automated Workflow:** Zero-touch access request handling.
- **Audit Trail:** Full tracking of who requested, when, and feedback status.

1. Project Overview

Custom Document Listing is a persistent, theme-aware SPFx web part for displaying curated document catalogs.

2. Architecture Diagram

3. Technical Stack

- **Framework:** SharePoint Framework (SPFx) 1.18+
- **Frontend:** React (Functional Components) + Hooks
- **UI System:** Fluent UI (Office UI Fabric)
- **Data Access:** SPHttpClient (REST API)
- **Automation:** Power Automate (Flows)
- **Messaging:** Exchange Online

4. UX Layer (SPFx)

Dynamic Catalog

- Fetches real-time data from SharePoint Libraries.
- **Filtering:** Side Nav (Category), Top Tabs (SubCategory), Search Bar.

Access Request Workflow

- Dedicated "Action" column for restricted files.
- Visual feedback on request status.

Premium UI/UX

- **Theme Aware:** Dynamic contrast calculation.
- **Responsive:** Mobile-friendly layout.

5. Data Layer

A. Source Document Library

- **Role:** Content Storage (PDFs, Docs).
- **Permissions:** **Read-Only** for all users.
- **Key Metadata:** Category, SubCategory, Description, IsPinned.

B. Request Access List

- **Role:** Transactional Logging.
- **Permissions:** **Contribute** (Create/Edit Own).
- **Key Metadata:** RequestID, Requester Email, FileID, Feedback Status.

6. Automation Layer

6. Automation Layer (Details)

1. Send Download Link

- Trigger: Item Created.
- Action: Generates secure link.
- Output: Emails user the download button.

2. Send Feedback Link

- Trigger: Scheduled (e.g., +14 days).
- Logic: If no feedback provided, ask for it.

3. Send Feedback Reminder

- Trigger: Scheduled check.
- Logic: Nudge user if feedback is overdue.

7. Security Model

Web Part Configuration

- **Site Selection:** Cross-site capability (Source Site vs. Request Site).
- **Mapping:** Dynamic field mapping in Property Pane.

Permissions

Component	Access Level	Rationale
Doc Library	Read-Only	Protects "Gold Copy" integrity.
Request List	Contribute*	<i>Item-level security:</i> Users only see their own requests.

8. Build & Deployment

Build Commands

```
# Install dependencies  
npm install  
  
# Build & Package (Production)  
npm run build
```

Deployment

1. Upload `.sppkg` to **App Catalog**.
2. Deploy and trust the solution.
3. Add web part to page.

9. Code Quality & Security

SonarQube Analysis Result: PASSED

- Security: A (0 Issues)

10. Future Roadmap

- **Feedback Collection:** In-app rating dialog (5-star + comments).
- **Usage Analytics:** Dashboard for "Top Requested Documents".
- **Auto-Approval:** Immediate access for "Public" category documents.
